

Design and Implementation of Computerized Auto (Car) Leasing Information System

ABSTRACT

Auto (Car) leasing has contributed to the growth of many industries in Nigeria. In dead companies who have short term contracts to execute find it cost ineffective to purchase their own cars for the short duration.

As a matter of fact, they depend on car leasing companies like Marlum Company the case study to lease cars to them throughout the duration of their contracts. But one factor remains indispensable; it is the manner in which the leasing services are operated most especially concerning efficiency. It is here the computer system comes into play for its augmentation with the human effort at Marlum construction company Enugu will definitely provide an efficient system tat will monitor the model and quantity of cars in stock for lease. This will go a long way to provide an efficient leasing service by Marlum construction company and will certainly encourage other firms who are into car hire services to expand into car leasing operations.
